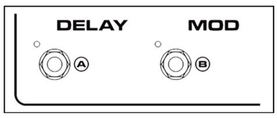
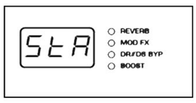
1. Connect the Cerberus to PC via USB cable

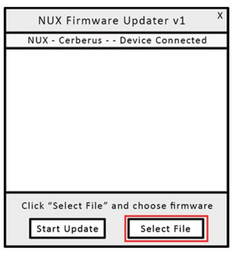
2. Hold A and B footswitches and turn ON the Cerberus. “STA” will appear on the pedal screen

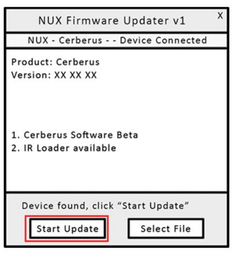




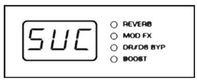
3. Open the DFU Updater and click “Select File”. Select the “Cerberus Firmware.bin” file

4. Now click “Start Update” button





5. Please wait until the update installation completed
DO NOT TURN OFF THE CERBERUS OR UNPLUG THE USB CABLE
When update installation completed “SUC” will appear on the pedal screen



6. Restart the Cerberus. Now the Cerberus is ready to use with Cerberus Software

Cerberus Software

Selecting and Loading an Impulse Response (IR) file
1. Click “Load” and select an IR file* and click “open”
2. Click IR box and open the IR file list
3. You can select a built-in IR file or the 3rd party IR file on the list
4. You can manage the 3rd party IR files by clicking “Rename” or “Delete”
